

## Water-resistant temperature sensor providing accuracy and low level of water consumption

### Main characteristics

- Supply voltage: 3.0-5.5 VDC
- Reading accuracy of  $\pm 0.5$  °C:
- between -10 °C and +85 °C
- Temperature reading:
- between -55 °C and +125 °C
- 64-bit unique ID
- RJ11 connector
- Cable length: 3 m
- Operating temperature: -55 °C to 125 °C
- Operating humidity: 0-90% (non-condensing)
- Interface (One Wire) passive probe with 2 DATA/GND connections
- Allows multiple sensors to be used on the same digital pin
- Compatible with NIT Lora, NIT and NIR IEEE 802.15.4 endpoints, ITS and Khomp gateways
- Standard waterproof protection, only the sensor tip is water resistant

### Applications

- Industry
- Agribusiness
- Thermostatic controls
- Thermometers
- Heat-sensitive systems
